Bill Viola Space Between Teeth

Widely-spaced teeth have a number of different causes. As noted before, spaces between teeth naturally occur in childhood in the period between baby teeth and adult teeth. Normal growth may also account for a temporary widening between teeth, but these are the most innocent of causes. Other more serious causes of spaced out teeth include:

Widely-Spaced Teeth | AZ Dentist, Your Phoenix Area ...

Teeth spacing is a condition in which the anterior (front) teeth are separated by large gaps. It is a common occurrence in children, and is often caused by thumb sucking or tongue thrusting. Crowding is the lack of space for all the teeth to fit normally within the jaws. The teeth may be twisted or displaced.

SPACE BETWEEN TEETH Space between teeth are commonly seen in children and adults. Spacing seen in the milk teeth in children is quite normal and good because space will accommodate the larger permanent teeth. In permanent teeth, however, it is a defect and needs to be corrected.

Space between Teeth | Jussmile Dental Clinic Chennai

Spaces larger than two millimeters cannot be filled with composite, as the teeth become too wide and the beauty desired by the patient is not met. For this reason, if there is a lot of space between the teeth, people should usually go for orthodontics, because despite the long time, the result is predictable and the patient does not lose any tooth tissue.
