Bridge & String Templates - Metropolitan Music
Normally, you buy a bridge blank 41.5 mm wide for the 4/4 violin and carve it to get the best sound. See Fig. 1 for a typical bridge blank. The position of the bridge is marked by the inner nicks in the f-holes. The back of the bridge should be at right angles to the top plate, the feet of the bridge should be in perfect contact with the arching.

Bridge Fitting Tools - Internationalviolin.com
Violin bridge fitting involves a certain amount of refining and shaping as well as knowing where to place the bridge. Every bridge starts out as a 'blank', a crude, thick, unshaped design. Bridge blanks come in different sizes. A standard full-size bridge is 41.5 millimetres wide, but a narrow violin will require a smaller bridge.

Violin Bridge Fitting | ViolinSchool.com
I have a book (which I put much trust in) which gives the radius of the bridge curve as 41mm and the height of the G/E strings above the end of the fingerboard as 5/2.5 mm respectively for a 4/4/ violin. It's fairly easy to draw a template for a bridge of this type and transfer it to a bit of cardboard or thin plastic or whatever takes your fancy!

4 string Fiddle Bridge curve pattern
projections. Eventually, you will want to have a sample template for each nominal size of all the instruments in the violin family. The sample bridge template will allow you to predict with relative accuracy the compensations that must be made when cutting the bridge blank so that you can adjust for any irregularities unique to the

Bridge Curve Templates | ViolinBridges.co.uk
Once the bridge has been selected and oriented, the feet should be sanded so that they fit perfectly to the arch of the top of the violin. Next, the top of the bridge should be cut down so that the bridge has a nice arch and the E string side rises 3mm above the fingerboard and the G side rises 5mm above the fingerboard.
